Wichtigste noch einmal herausstellen -interessante Exkurse zu aktuellen Themen und späteren Tätigkeitsbereichen -optimale Prüfungsvorbereitung durch über 600 Fragen aus staatlichen Examina und die entsprechenden Antworten -ergänzendes Glossar mit über 400 Stichworten mit Angaben der englischen Bezeichnung des jeweiligen Fachausdrucks -annähernd 100 kommentierte Internet-Adressen Auf kompakte aber verständliche Weise wird das Basiswissen der Chemie präsentiert. Durch die praxisnahe Betonung biologisch-medizinischer Themen unterscheidet es sich deutlich von herkömmlichen Chemie-Büchern. Vollkommen zu Recht ist und bleibt das Buch damit ein Bestseller. "Eine noch größere Bedeutung als bisher wird das Buch in der MTA-Ausbildung einnehmen, da Zusammenhänge auf zellulärer Ebene und damit verbunden die chemischen und biochemischen Prozesse als wichtige Kernkompetenzen in allen vier Schwerpunktfachbereichen, wie Histologie-Zytologie, Klinische Chemie, Hämatologie und Mikrobiologie mit den jeweiligen Unterbereichen gelehrt werden." Aus dem Geleitwort von Christiane Maschek, Präsidentin des DVTA e.V. "In Zeiten des unbegrenzten Wissenswachstums gelingt es in der neuen Auflage, aufgrund didaktisch kluger Reduktion, die wesentlichen Fachinhalte herauszukristallisieren. Auch ohne Vorkenntnisse in Chemie erlernt der Leser in kurzer Zeit die komplexen Zusammenhänge biochemischer Prozesse und versteht die chemischen Grundlagen der Bio- und Gentechnologie." Aus dem Geleitwort von Dr. Hartmut Böhm, Vorsitzender des Arbeitskreises Biologisch-technische Ausbildung im Verband Biologie, Biowissenschaften und Biomedizin

MasteringBiology should only be purchased when required by an instructor. -- For courses in cell biology. Widely praised for its strong biochemistry coverage, Becker's World of the Cell, Eighth Edition, provides a clear, up-to-date introduction to cell biology concepts, processes, and applications. Informed by many years of teaching the introductory cell biology course, the authors have added new emphasis on modern genetic/genomic/proteomic approaches to cell biology while using clear language to ensure that students comprehend the material. Becker's World of the Cell provides accessible and authoritative descriptions of all major principles, as well as unique scientific insights into visualization and applications of cell biology. Media icons within the text and figures call attention to an enhanced media selection—350 up-to-date animations, videos, and activities—that helps students visualize concepts. The Becker World of the Cell 8e Technology Update brings the power of MasteringBiology to Cell Biology for the first time. MasteringBiology is an online homework, tutorial and assessment system that delivers self-paced tutorials that provide individualized coaching, focus on your course objectives, and are responsive to each student's progress. The Mastering system helps instructors maximize class time with customizable, easy-to-assign, and automatically graded assessments that motivate students to learn outside of class and arrive prepared for lecture.

Volume 36 of "Progress in Drug Research" contains 5 articles and the various indexes which facilitate its use and establish the connection with the previous volumes. While all articles deal with some of the topical aspects of drug research, the contribution by Robert R. Ruffolo et al. on "Drug receptors and control of the cardiovascular system: Recent advances" is indeed in its own right a monographic presentation of this important domain. The remaining four reviews provide an overview of the work in

volved in the search for new and better medicines, with a focus on chemical, pharmacological, toxicological, biological, biochemical and molecular modeling studies. In the 31 years this series has existed, the Editor has enjoyed the help and advice of many colleagues. Readers, the authors of the individual articles, and, last but not least, the reviewers have all contributed greatly to the success of PDR. Although many comments received have been favorable, it is nevertheless necessary to analyze and to reconsider the current position and the direction of such a series. So far, it has been the Editor's aim to help spread information on the vast domain of drug research, and to provide the reader with a tool helping him or her to keep abreast of the latest developments and trends.

Siting Futurity: The "Feel Good" Tactical Radicalism of Contemporary Culture in and around Vienna shows how cultural practitioners in and around Vienna draw on their historical knowledge of locality to create rousing productions designed to get audiences to inform themselves about useful aspects of history, to get them to engage their presents, and to help make possible more socially equitable futures. Analyses of politically engaged works of contemporary theatre, film, and photography set in and around Vienna help to identify a historically oriented mechanism that enables artists to tap into Vienna's extraordinary, and extraordinarily under-appreciated, tradition of protest culture that dates back to the action that brought about the Wiener Neustadt "Blood Court" in the 16th century, but really came into its own with the city's most influential occupation of an abandoned slaughterhouse for 100 days in the late summer of 1976. It also shows how work with a connection to Vienna by international stars like David Bowie, Wes Anderson, and Christoph Schlingensiefel has absorbed the same principles. While the overwhelming scale of technological development and the ensuing problems and crises may not have been deliberately designed to induce resignation, passivity, and despair, those who benefit from the

related hyperobjects of financialization and climate change must find it convenient that they do, as demoralization reduces resistance to their profit-making machinations. It is in this context that Red Vienna's proud tradition of social engagement and long tradition of resistance and radicality deserves to be better known. Susan Ingram is Professor in the Department of Humanities at York University, Toronto, where she coordinates the Graduate Diploma for Comparative Literature and is affiliated with the Canadian Centre for German and European Studies and the Research Group on Language and Culture Contact. She is the general editor of Intellect Book's Urban Chic series and the co-author of the volumes on Berlin, Vienna, and Los Angeles. A past president of the Canadian Comparative Literature Association, her research interests revolve around the institutions of European cultural modernity and their legacies.

This volume was originally intended to be an English translation of the book *MetlOden in der medizinischen Cytogenetik*, published in 1970. Just about then, however, a number of new techniques were introduced in human cytogenetics and soon acquired the utmost importance, particularly in clinical diagnosis, so that the English edition had to be considerably enlarged. As a result, there are now twelve chapters instead of eight, and two additional authors have been called upon, Dr. KRONE and Dr. SCHNEDL. In addition to the up-to-date presentation of conventional methods of cell culture and techniques for the preparation and identification of human chromosomes, this text covers the various techniques of producing banding patterns and applying them in chromosome identification. Further, it deals with the culture of amniotic fluid cells and gives instructions for handling tissue-culture cells for

bio chemical analysis; it thus meets the ever-increasing requirements of a modern cell-culture laboratory. To paraphrase the aims of this book, we quote part of the preface to the German edition: "It was intended to collect the various methods so as to make them accessible for laboratory use. Furthermore, it is hoped that the reader faced with current research problems will be stimulated to modify and supplement the techniques described, instead of merely applying them automatically. In a rapidly developing field, some methods are still preliminary, and no final presentation seems possible.
