put in 2 flight-plans (with altitudes), and an alternate airport. You can do everything that you can to the route manager on these 2 flightplans.

Boeing 787-8 Dreamliner - FlightGear wiki

The PDCS was developed jointly by Boeing and Lear Seigler in the late 1970's. It enabled EPR and ASI bugs to be set by the computer and advise on the optimum flight level, all for best fuel economy. It was trialed on two in-service aircraft, a Continental 727-200 and a Lufthansa 737-200 for nine months in 1978 with regular line crews and a flight data observer.
