This book reviews current trends in the airline industry and its related suppliers, providing an insight into the forces that are changing its dynamics. It examines the factors reshaping the industry's structure with a view to identifying the key issues whose impact will be critical in the future. With contributions from senior industry executives and academics, the objective is to evaluate the core competencies that are determining the current shape of the industry and examine the forces that will change its direction.

Following "Blueprint for a Green Economy" (the Pearce Report), David Pearce and his team have turned their attention to global environmental threats. If it makes sense to apply economic analysis to national environmental problems, then it makes even more sense to apply it to world-wide dangers. The authors start by describing the reasons for using economic approaches to common resources like climate, ozone and biodiversity. They then take a detailed look at the economic ways of tackling the issues involved in global warming, ozone layer depletion, environmental degradation in the Third World, population, rain forests, aid, equity, international environmental co-operation and what might amount to green foreign policies. They show not only how to take all these things into account in economic theory, but also the economic price of failing to do so. Blueprint 2 is an agenda for international and governmental economic action.

Digital technologies are spreading rapidly, but digital dividends—the broader benefits of faster growth, more jobs, and better services—are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million entrepreneurs in China—one third of them women—can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way. Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture. The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'—the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and the institutions that are accountable to citizens—have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.

Airline Operations and Management: A Management Textbook is a survey of the airline industry, mostly from a managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly economics, operations, marketing and finance, in developing the overview of the industry. The focus is on tactical, rather than strategic, management that is specialized or unique to the airline industry. The primary audiences for this textbook are both senior and graduate students of airline management, but it should also be useful to entry and junior level airline managers and professionals seeking to expand their knowledge of the industry beyond their own functional area.

Extensively revised and updated edition of the bestselling textbook, provides an overview of recent global airline industry evolution and future challenges Examines the perspectives of the many stakeholders in the global airline industry, including airlines, airports, air traffic services, governments, labor unions, in addition to passengers Describes how these different players have contributed to the evolution of competition in the global airline industry, and the implications for its future evolution Includes many facets of the airline industry not covered elsewhere in any single book, for example, safety and security, labor relations and environmental impacts of aviation Highlights recent developments such as changing airline business models, growth of emerging airlines, plans for modernizing air traffic management, and opportunities offered by new information technologies for ticket distribution Provides detailed data on airline performance and economics updated through 2013

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change—these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there—what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhjit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, Good Economics for Hard Times makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

Between the 18th and 19th centuries, Britain experienced massive leaps in technological, scientific, and economical advancement

Strategic management is a field that has diversity in approach and scope, but relative homogeneity in pedagogy. This book, a refreshed edition of its successful predecessor, brings something different to the field, by concisely introducing it with a focus on doing business in the Middle East and North Africa. Supplemented by online case studies and other resources, the reader is exposed to a plethora of concepts, theories, practical implications, and experiential exercises in the strategic management process. The updated text explores key regional issues, including the "Arab Spring", economic recession, corporate social responsibility, the role of women in business and the rise of emerging economies. The reader is encouraged to look at the world in light of the challenges many organizations are facing around the globe. Features like "Stop and Think Critically" and "Focus" points throughout each chapter encourage and inspire a thoughtful reading of the text. This is a book designed to aid undergraduate and graduate students, as well as managers in both for-profit and non-profit sectors. The authors guide the reader through both new and ongoing issues in the field of strategic management, and allow them to foster a greater understanding of this ever-developing field.
