Insolent and defiant, the Chants de Maldoror, by the self-styled Comte de Lautr é amont (1846-70), depicts a sinister and sadistic world of unrestrained savagery and brutality. One of the earliest and most astonishing examples of surrealist writing, it follows the experiences of Maldoror, a master of disguises pursued by the police as the incarnation of evil, as he makes his way through a nightmarish realm of angels and gravediggers, hermaphrodites and prostitutes, lunatics and strange children. Delirious, erotic, blasphemous and grandiose by turns, this hallucinatory novel captured the imagination of artists and writers as diverse as Modigliani, Verlaaine, Andr é Gide and Andr é Breton; it was hailed by the twentieth-century Surrealist movement as a formative and revelatory masterpiece.

This interdisciplinary volume introduces new theories and ideas on creativity from the perspectives of science and art. Featuring contributions from leading researchers, theorists and artists working in artificial intelligence, generative art, creative computing, music composition, and cybernetics, the book examines the relationship between computation and creativity from both analytic and practical perspectives. Each contributor describes innovative new ways creativity can be understood through, and inspired by, computers. The book tackles critical philosophical questions and discusses the major issues raised by computational creativity, including: whether a computer can exhibit creativity independently of its creator; what kinds of creativity are possible in light of our knowledge from computational simulation, artificial intelligence, evolutionary theory and information theory; and whether we can begin to automate the evaluation of aesthetics and creativity in silico. These important, often controversial questions are contextualised by current thinking in computational creative arts practice. Leading artistic practitioners discuss their approaches to working creatively with computational systems in a diverse array of media, including music, sound art, visual art, and interactivity. The volume also includes a comprehensive review of computational aesthetic evaluation and judgement research, alongside discussion and insights from pioneering artists working with computation as a creative medium over the last fifty years. A distinguishing feature of this volume is that it explains and grounds new theoretical ideas on creativity through practical applications and creative practice. Computers and Creativity will appeal to theorists, researchers in artificial intelligence, generative and evolutionary computing, practicing artists and musicians, students and any reader generally interested in understanding how computers can impact upon creativity. It bridges concepts from computer science, psychology, neuroscience, visual art, music and philosophy in an accessible way, illustrating how computers are fundamentally changing what we can imagine and create, and how we might shape the creativity of the future. Computers and Creativity will appeal to theorists, researchers in artificial intelligence, generative and evolutionary computing, practicing artists and musicians, students and any reader generally interested in understanding how computers can impact upon creativity. It bridges concepts from computer science, psychology, neuroscience, visual art, music and philosophy in an accessible way, illustrating how computers are fundamentally changing what we can imagine and create, and how we might shape the creativity of the future.

Following the Pulitzer prize-winning collection Stag's Leap, Sharon Olds gives us a stunning book of odes. Opening with the powerful and tender "Ode to the Hymen," Olds addresses and embodies, in this age-old poetic form, many aspects of love and gender and sexual politics in a collection that is centered on the body and its structures and pleasures. The poems extend parts of her narrative as a daughter, mother, wife, lover, friend, and poet of conscience that will be familiar from earlier collections, each episode and memory burnished by the wisdom and grace and humor of looking back. In such poems as "Ode to My Sister," "Ode of Broken Loyalty," "Ode to My Whiteness," "Blow Job Ode," and "Ode to the Last Thirty-Eight Trees in New York City Visible from This Window," Olds treats us to an intimate examination that, like all her work, is universal, by turns searing and charming in its honesty. From the bodily joys and sorrows of childhood to the deaths of those dearest to us, Olds shapes the world in language that is startlingly fresh, profound in its conclusions, and life-giving for the reader.

Davie Jones—an ugly duckling growing up in small-town Mississippi with a mother who couldn't get any meaner—is positive her life couldn't be any worse. Just when she's resigned herself to her fate, she sees a movie that will change her life—Sixteen Candles. But in her case, life doesn't imitate art. Tormented in school and hopelessly in unrequited love with a handsome football player, Davie finds it bittersweet to dream of Molly Ringwald endings. When a cruel school prank goes too far, Davie leaves the life she knows and reinvents herself in the glittery world of Hollywood—as a beautiful and successful lounge singer. Just as she's about to ride off into the L.A. sunset, the past comes back with a vengeance, threatening to crush Davie's dreams—and break her heart again. With wholly original characters and a cinematic storyline, 32 Candles introduces Ernesa T. Carter, a new voice in fiction with smarts, attitude, and sassiness to spare.

Biomedical Ethics: A Canadian Focus offers a detailed, engaging examination of issues and debates encompassing biomedical ethics. Using many Canadian cases and examples, ethical issues are explored in the context of our health care system. Debates include patient autonomy, confidentiality, morality, and genetic engineering, as well other topics related to modern health care. Over one hundred renowned case studies and articles are included, ranging from early eugenics programs to moderngenetic testing, giving students valuable insights into biomedical ethics in Canada.

From the bestselling 1001 series, comes a collection of 1001 quotations from numerous brilliant minds of the Ancient World through to the present day. With quotes from everyone including Marcus Aurelius, Sun Tzu, Shakespeare and Nietzsche through to Ellen DeGeneres, Nelson Mandela, Mark Zuckerberg and Monty Python's Flying Circus, there is an immense range of ideas, witticisms and musings to ponder. The quotations cover a wide range of topics, including art and literature, culture, philosophy, politics, psychology and religion, made accessible and brought to life by being placed in their historical contexts and accompanied by a wealth of illustrations.

In pursuit of an elusive book on her shelves, Hill encountered dozens of others that she had never read, or forgotten she owned, or wanted to read for a second time. The discovery inspired her to embark on a year-long voyage through her books, in order to get to know her own collection again.

A collection of 300 multiple-choice questions which are divided into subject chapters corresponding with those in General and Systematic Pathology, a complementary text. However, full explanatory answers are supplied so that this book may be used with any pathology textbook. The questions take the form of a stem with five branches which must be marked true or false. This is the most commonly used system of questions in British medical schools and is usually scored as +1 for a correct response and zero for no response.

Your dissertation is not a hurdle to jump or a battle to fight; as this handbook makes clear, your dissertation is the first of many destinations on the path of your professional career. Destination Dissertation guides you to the successful completion of your dissertation by framing the process as a stimulating and exciting trip—one that can be completed in fewer than nine months and by following twenty-nine specific steps. Sonja Foss and William Waters—your guides on this trip—explain concrete and efficient processes for completing the parts of the dissertation that tend to cause the most delays: conceptualizing a topic, developing a pre-proposal, writing a literature review, writing a proposal, collecting and analyzing data, and writing the last chapter. This guidebook is crafted for use by students in all disciplines and for both quantitative and qualitative dissertations, and incorporates a wealth of real-life examples from every step of the journey.

Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independentmicro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff andsmaller organizations following less strict regulations and using 'off-the-shelf' components or locally made machinery.
