Pat and Kay Fisher document their life together. Fifty plus years starting in Minnesota, going through the Navy in Whidbey Island, Washington and Virginia Beach, Virginia, working for thirty years in Massachusetts on computers and finally retiring to Arizona.

Drill Press is also known as book 5 from the best selling 7 book series, 'Build Your Own Metal Working Shop From Scrap'. If you have done the projects progressively as the author did you will have done all your drilling with an electric hand drill up to this point. That 's tough and tedious work to say the least and you will really appreciate a drill press. In fact it would not make much sense to proceed to the deluxe accessories without one. You could buy one of course, But anyone could do that.... It drills to the center of a 12" circle with a quill travel of 2 1/2". Two stage speed reduction gives a low speed of 260 rpm for serious large hole drilling. Ball bearings in spindle driven pulley and idler make it smooth and quiet running. Quill feed is by cable or chain drive so there is no rack and pinion to cut.

Model engineering was popularized by pioneering steam enthusiasts, and rapidly grew into an exciting worldwide hobby for amateur engineers. This book describes how model steam engines work, outlines the development of the machine tools used to build the models, and investigates the seven different categories of model engines, which include models built to support patent applications, and those built purely for pleasure. The author, himself a model steam locomotive driver, also delves into the possible pitfalls and practicalities of scale model engineering. Generously illustrated, this is guaranteed to interest any aspiring engineer, as well as collectors of steam engines.

A practical perspective on equipment and processes with instruction for many projects shown.

You're standing in front of an old card table in a driveway at a garage sale. On that table is a one-quart aluminum saucepan, a votive candle holder, pieces of some office machinery, and a wooden awards plaque. What do you see there? If you did not answer "a six-cylinder radial electromagnetic attraction motor," then you need this book!H.P. Friedrichs (author of The Voice of the Crystal and Instruments of Amplification) returns this time to explore the principles behind the operation and

construction of five simple, yet impressive, model electric motors. Aspiring mechanical model makers are often discouraged by their lack of access to machine tools, like mills, lathes, or drill presses. Friedrichs demonstrates that with some basic knowledge, an open eye, and a sharp mind, one can use commonly available (and often discarded) parts and materials to engineer one's way around any lack of expensive machine tooling. In fact, every motor in this book was built from scrap, and can be assembled with hand tools. You'll learn where to hunt for and find materials, and where to salvage suitable bearings. You'll know where useful solenoids can be extracted from scrap, and how to fabricate bobbins to wind your own. You'll learn how to time your motors, fashion a connecting rod, make a commutator from scratch, use a hall effect sensor to detect magnet position, use a transistor as a switch, and much more. Hardcover, 160 pages, 177 photos and illustrations. THE AUTHOR H.P. Friedrichs is a degreed electrical engineer (BSEE), inventor, and author with more than three decades of experience working in domains ranging from audio, medical, and radio, to software, automotive, and aerospace. At present, he is a Principal Engineer with Honeywell, involved in the design and support of specialized equipment used for testing and validating aircraft power generation products. He has five U.S. patents to his credit and holds three radio licenses including Extra-Class Amateur (AC7ZL), Commercial Radio Operator with Radar Endorsement and GMDSS Operator/Maintainer with Radar Endorsement. He is also a certified VE.

The Milling Machine is also known as book 4 from the best selling 7 book series, 'Build Your Own Metal Working Shop From Scrap'. Especially designed for the developing home shop. It 's a horizontal miller, but it has the full range of vertical mill capability when used with the angle plate on the work table. Extremely rigid and versatile. The work table is 2 3/8" x 12" with a 3/8" T-slot and it travels a full 12". Eight speeds from 43 rpm to 2430 rpm. The spindle raises as much as 6" above the work table and the transmission is designed to follow the vertical travel without straining the column or changing the belt tension. Accessories included in the project are angle plate, face plate, fly cutter, tail-stand and compound slide assembly with which you can do large swing lathe jobs. Still no need to look for outside help. It 's a miller and more, and you can build it your self.

Possibly the best-known automotive model engineer in the world, Gerald Wingrove produces breath-takingly detailed miniatures that are to be found in the foremost collections. Here he presents a showcase of the models he has constructed in 1/15 scale, a size that allows chassis, engine and body detail to be reproduced with perfect accuracy.
