amount of time. There are two ways to study, smart or hard. If you will follow my information and learn the key points of each chapter, you will make an excellent grade in your A&P class. In each chapter concentrate your efforts on learning the key terms. The key terms are the ones you are most likely to see on your exams. Learn to associate words and how to connect them. For example, anatomy is the study of the structure of the human body. Look at the key words in this sentence, anatomy and structure. Learn how to pick out these key terms and remember them, not the entire sentence or paragraph full of information. When given a paragraph, page or whatever; just memorize the key words and then learn how to associate them. Learn what they have in common and be able to speak from one word to the next. This will be the best way to learn your anatomy text. I will make the assumption that anyone reading this book is

taking human anatomy and physiology. You will still need your text, but more as a reference to pictures and such. This guide will give you the important information from the chapters, which will be what you are most likely to see on an exam. Sample questions will be included, which are also the most likely for you to see on an exam. Note also that this book is not a guide for A&P lab. An anatomy lab book is little more than a book with lots of pictures in it. That is what anatomy is, memorizing parts and pieces of the body. You simply look at the picture in your book and then learn those parts on a model. You may be looking at a skull, brain, kidney, etc., it is simple memorization. This book is more to help you with the lecture.

movement, providing students an understanding of the body ' s structure and function as it explores the elegance and complexity of the body ' s functional movement anatomy. New Tools and Learning Aids Dynamic Human Anatomy comes with many tools and learning aids, including a web study guide and new instructor resources, each featuring new material and tools. The web study guide offers the following:

- Tables that indicate articulations for the spine and upper and lower extremities
- Tables that list the origin, insertion, action, and innervation for all major muscle groups
- Practice problems that allow students to apply the muscle control formula discussed in chapter 6
- Critical thinking questions

The instructor resources include:

- A presentation package with slides that present the key concepts from the text and can be used for class discussion and demonstration
