The Weed Flora Of Egypt

Macrofossils of weeds retrieved from archaeological sediments in Egypt are discussed in terms of their presence, preservation and representation significance. The study reveals 112 field weeds from 61 archaeological sites dating from Predynastic times (4500 B.C.) up to the Graeco-Roman period (A.D. 395).

Common Plants of the Western Desert of Egypt by Petr ...

In total 185 species can be considered weeds of the farmlands of Egypt (Nile-land, Mediterranean coastal land and the oases). They comprise 110 winter, 49 summer and 26 all-year weeds. Among the winter weeds, 96 species are Mediterranean taxa (mono-, bi-, and pluriregional).

Some aspects of the biodiversity of the weed flora in the ...

Many of the alien species (Chenopodium album, Dactyloctenium aegyptiacum, Enarthrocarpus lyratus, Foeniculum vulgare, Pseudognaphalium luteo-album, Launaea nudicaulis, Matricaria recutita, Portulaca oleracea, Ranunculus sceleratus, Setaria verticillata and Trigonella hamosa) recorded in the present study were common segetal and ruderal weeds in the Nile Delta (Shaltout et al., 2010), due to the change of the land use in the study area (e.g. the establishment of summer resorts and gardens ...

This volume, published in memory of Barbara Adams, presents 57 contributions by authors from 16 different countries and contains the results of the latest research on Predynastic and Early Dynastic Egypt. In addition to papers originally presented at the 2002 conference in Krakow, there are the invited contributions by the friends and colleagues of Barbara Adams, including several on new discoveries from and thoughts about the site of Hierakonpolis.

This book is an attempt to compile and integrate the information documented by many botanists, both Egyptians and others, about the

## Read Book The Weed Flora Of Egypt

vegetation of Egypt. The first treatise on the flora of Egypt, by Petrus Forsskal, was published in 1775. Records of the Egyptian flora made during the Napoleonic expedition to Egypt (1778–1801) were provided by A. R. Delile from 1809 to 1812 (Kassas, 1981). The early beginning of ecological studies of the vegetation of Egypt extended to the mid-nineteenth century. Two traditions may be recognized. The first was general exploration and survey, for which one name is symbolic: Georges-Auguste Schweinfurth (1836–1925), a German scientist and explorer who lived in Egypt from 1863 to 1914. The second tradition was ecophysiological to explain the plant life in the dry desert. The work of G. Volkens (1887) remains a classic on xeroph-ism. These two traditions were maintained and expanded in further phases of ecological development associated with the establishment of the Egyptian University in 1925 (now the University of Cairo). The first professor of botany was the Swedish Gunnar Tackholm (1925–1929). He died young, and his wife Vivi Tackholm devoted her life to studying the flora of Egypt and gave leadership and inspiration to plant taxonomists and plant ecologists in Egypt for some 50 years. She died in 1978. The second professor of botany in Egypt was F. W.

There is an essential connection between humans and plants, cultures and environments, and this is especially evident looking at the long history of the African continent. This book, comprising current research in archaeobotany on Africa, elucidates human adaptation and innovation with respect to the exploitation of plant resources. In the long-term perspective climatic changes of the environment as well as human impact have posed constant challenges to the interaction between peoples and the plants growing in different countries and latitudes. This book provides an insight into/overview of the manifold routes people have taken in various parts Africa in order to make a decent living from the provisions of their environment by bringing together the analyses of macroscopic and microscopic plant remains with ethnographic, botanical, geographical and linguistic research. The numerous chapters cover almost all the continent countries, and were prepared by most of the scholars who study African archaeobotany, i.e. the complex and composite history of plant uses and environmental transformations during the Holocene.
